

Timelines for Group 3E – Circuit Excel Regulation Review.

CERA (Circuit Excel Racing Association) is establishing a new process to address the annual process of regulation review for Group 3E – Circuit Excel.

January to Mid-March

CERA will invite State club members to submit suggested regulations changes to their State Club committees.

Mid-March to the end of March

State Club committees to evaluate input from members, compile the valid feedback and submit to CERA.

April

CERA will compile the feedback from State club committees, address priorities and setup feedback into the regulation sections. A vote will be required whether to proceed with investigating any particular suggestions submitted from States. From this if required CERA will setup specialist working groups that have experience and expertise in the areas that have been highlighted for review. For example if the review is gearboxes a working group will be setup from individuals involved with that valid expertise in transmissions.

May to June

Working groups to discuss feedback review and compare to current regulations. Working groups will then compile proposed changes to the regulations and submit their feedback to CERA.

July

CERA to analyse feedback and start on the rewording process of the regulations sections that may require change and vote on proposed changes, majority vote needed for any changes to rules.

Early August

CERA to inform State committees of future Regulation changes that will be submitted to Motorsport Australia.

End of August

CERA to submit any changes for the regulations to Motorsport Australia.
